

We want patients to see better, for longer, and with fewer treatments.

Sight is precious, and at Alimera Sciences we are passionate about helping people with impaired sight due to retinal diseases live happier and healthier lives.

Collaboration is key.

We believe that it is vital that we work in partnership with the medical community and patient organisations to achieve our goals.

Working with clinicians

Alimera Sciences is committed to discovering new ways to improve people's lives; a critical part of achieving this mission is through our clinical research programme. Some of the exciting research we have conducted has led to many great advances in understanding of diseases affecting the back of the eye and in developing therapies to treat them.

We are committed to responsible transparency regarding the clinical trials we undertake. Our clinical trials are registered on [clinicaltrials.gov](#) and you can find more information on [FAME](#), [FAMOUS](#), [IRISS](#) and [001](#) by following the external links.

Working with patient groups

The patient is at the centre of everything we do. Working with patient organisations helps us understand the challenges faced by people with sight-threatening diseases, but these partnerships can also help us address areas where patients are struggling to access effective medicines.

Promoting the science of retina

We work with professional medical organisations to encourage the exchange of emerging scientific and medical knowledge, through such platforms as our electronic CME program.

In addition, we actively encourage to the medical community to present their high-quality research at scientific conferences.
